GRM Series:
The Murata GRM series is a complete line of ceramic chip capacitors with a wide range of voltages and sizes. These capacitors have temperature characteristics ranging from C0G to Z5U. GRM series is offered with a Nickel (Ni) barrier termination plated with Tin (Sn), highly resistant to migration and is lead free/RoHS compliant. Stringent dimensional tolerances allow highly reliable, high-speed automatic chip placement on PCBs.

GRM Hi-Cap Series:
The Murata Hi-Cap, Ta replacement product lineup is available with capacitance of 1µF and larger, in voltages of 6.3V ~ 50V. Why use ceramic chips over Ta and Al capacitors? Ceramic chips offer better reliability, electrical performance, no polarity, and allow design engineers to downsize designs with various package options. This line of high volumetric multilayer capacitance ceramic chip capacitors (MLCC) has excellent high frequency noise absorption performance compared to Ta and Al caps. For bypass/decoupling applications, MLCC is equivalent to 1/2 to 1/5 the capacitance value of a Ta capacitor because impedance (ESR) of MLCC is lower at higher frequencies (above 100kHz.) Consider Murata Hi-Cap as your Ta capacitor replacement.

Operating Temperature Range:
• C0G (NP0): -55°C ~ 125°C • X7R: -55°C ~ 125°C • X5R: -55°C ~ 85°C • Y5V: -30°C ~ 85°C • Z5U: 10°C ~ 85°C

FILM TECHNOLOGY

SSM SUSUMU CO., LTD

0603 / 0805 SMD 0.05% Thin Film Chip Resistors — Ultra Precision / Ultra Reliable RG Series - 1/16, 1/10 Watt

g the conventional properties of Thin Film Resistors, SSM has successfully ved the environmental, resistance stability and sustained durability issues that are untered while operating at higher temperatures. We call this "RG" Series (Resistor). Higher reliability parts are indispensable in the Automotive, Measurement and cal Industries as quality requirements increase. Susumu provides a solution with RG Series thin film chip resistors. The RG series provides excellent TCR, Low nt Noise, and Linearity specifications needed in high frequency applications. Tight nce allow for circuit simplification and the elimination of trim pots which leads to savings.

rmance: Inorganic protective coating assures high reliability, durability and ction against heat and moisture.

nal Derating: The RG series is able to dissipate 100% of rated power at 85°C. For cations operating above 85°C, the user must derate the resistors in accordance he derating curve listed.

cations: Suitable for automotive, measurement devices and any application where acy and reliability are required.

YAGEO Surface Mount 1% & 5% Thick Film Chip Resistors

DESCRIPTION: The resistors are constructed on a high grade ceramic body (aluminum oxide). Internal metal electrodes are added at each end and connected by a resistive paste which is applied to the top surface of the substrate. The composition of the paste is adjusted to give the approximate resistance required and the value is trimmed to within tolerance, by laser cutting of the resistive layer. The resistive layer is covered with a protective coat. Finally, the two external end terminations are added. For ease of soldering the outerlayer of these end terminations is a lead/tin alloy.

Panasonic 5% Metal Oxide Film Resistors

Now Available In Tape and Reel

Matsushita fixed metal oxide film resistors feature small sized dimensions and have higher power rating at the same size as the conventional type.

Features:
Flame retardancy of the exclusively formulated inorganic insulative material exhibits an equivalent performance requirements of UL-94 (VE-O) and when operated at a potential less than 16 times RCWV, Matsushita metal (oxide) film resistors never flame nor arc.

The coating and markings resist normal washing of solvents, such as Freon (TE, TMC, TF), trichloroethane.

The resistor element is a resistive wire which is wound in a single layer on a ceramic rod. Metal caps are pressed over the ends of the rod. The ends of the resistance wire and the leads are connected to the caps by welding. Tinned copper-clad iron leads with poor heat conductivity are employed permitting the use of relatively short leads to obtain stable mounting without overheating the solder joint. The resistor is coated with a green silicon cement which is not resistant to aggressive fluxes. The coating is non-flammable, will not drip even at high overloads and is resistant to most commonly used cleaning solvents, in accordance with MIL-STD-202E, method 215 and IEC 60068-2-45.

ittle Demon® Carbon Composition Molded Resistors

and OF Series - 5% Tolerance, OA Series - 10% Tolerance

e Demons are small, reliable carbon composition stors with exceptional strength. They are made tough by olding process that combines the leads, insulation and stive element into an integrated unit. Along with their ll size, Little Demons perform with low noise, dissipate rapidly and offer high temperature stability.

r codes are readable even after prolonged use thanks very durable coating that resists abrasions and chipping nally associated with automatic insertion equipment.

Features: • Molded insulation for high dielectric strength • Rugged construction • High surge capabilities • Comparable to "Mil" RC07, RC20, and RC32 types

Material: • Terminals: Solder-coated copper lead • Body: Molded Phenolic

Electrical: • Tolerance: ±5% (OD/OF) ±10% (OA) • Derating: Linearly from 100% @ +70°C to 0% @ 130°C

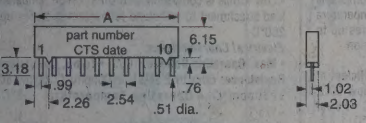
esistor Networks

OVER 1,500 VALUES AVAILABLE

50 SERIES
ngle-In-Line

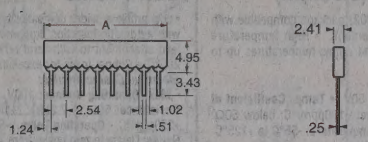


olid ceramic networks are more efficient because they operate at wer temperatures. This translates into long term reliability in a sistor network.

pecifications:
Resistance Values: 22Ω through 1 MegΩ • **Resistance olerance:** ±2% • **Temperature Coefficient:** ±100PPM/°C typical

eatures:
Low-profile construction • Excellent power dissipation • High liability • Alumina substrate

770 SERIES
Single-In-Line Conformal

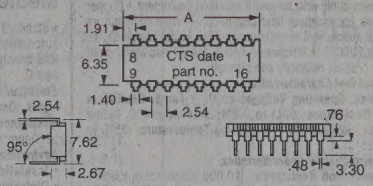


Standard Products 770 series is available in 6, 8, and 10 pin sizes, and in many available resistance values.

Specifications:
• **Resistance Values:** 22Ω through 1 MegΩ • **Resistance Tolerance:** ±2% • **Temperature Coefficient:** ±100PPM/°C typical

Features:
• High reliability resistors • Low-profile construction • .100" lead spacing • High reliability • Alumina substrate

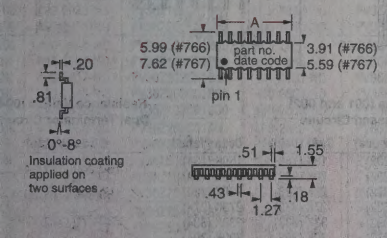
760/761 SERIES
Dual-In-Line



Requires 30% less board space than molded networks of the same power rating.

Specifications:
• **Resistance Range:** 22Ω through 1 MegΩ • **Resistance Tolerance:** Standard: ±2% • **Max. Operating Voltage:** 50V not to exceed rated power • **Temp. Coefficient:** 100Ω through 1 MegΩ ±100PPM/°C typical, Below 100Ω ±200PPM/°C typical • **Operating Temp. Range:** –55°C to 125°C • **Storage Temp. Range:** –55°C to 125°C • **Dielectric Strength:** 100V

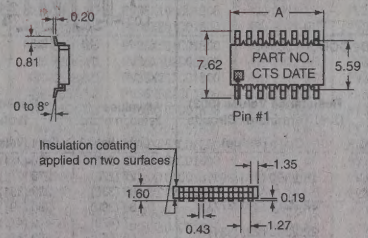
66/767 SERIES
ual-In-Line Surface Mount



in cover coating generates higher power ratings. Thin proprietary over protection keeps resistors near the surface, allowing the umina substrate to act as a heat sink. That means higher power tings than molded networks.

pecifications:
Resistance Values: 22Ω through 1 MegΩ • **Resistance olerance:** ±2%. • **Temperature Coefficient:** ±100PPM/°C typical

768 SERIES
Dual-In-Line Surface Mount



Medium body, small outline products. Low profile — board to network clearance of 0.005"/0.010".

Specifications:
• **Resistance Range:** Standard: 10Ω to 1MegΩ • **Resistance Tolerance:** Standard: ±2% or 0.5Ω (whichever is greater) • **Max. Operating Voltage:** 50V not to exceed rated power • **Temp. Coefficient:** Standard: 100Ω to 1 MegΩ ±100PPM/°C typical, 10Ω to 99Ω ±200PPM/°C typical • **Operating Temp. Range:** -55°C to 125°C • **Dielectric Strength:** 100VAC

Static Guard Multilayer Ceramic Varistor TVS Surface Mount

ESD Protection for CMOS and Bi-Polar Systems

AVX StaticGuard devices are manufactured with the same multilayer construction as the AVX TransGuard Transient Voltage Suppressers (TVS).

The low capacitance of the StaticGuard products makes them ideal choices for ESD protection on high speed data lines.

Also, the low leakage current feature makes these parts optimal for battery operated equipment.

5KP Series – 5000 Watt Axial TVS

When no problems exist, TVS diodes are invisible to the circuits they're protecting. But when potentially damaging transients occur, the TVS diodes provide high-speed "clamping" to prevent damage- after which they return to their electronically invisible state. Littelfuse TVS diodes are available in industry-standard packages. **Features:** • Glass passivated junction • Low clamping factor • Uni-directional and bi-directional • 100% surge tested • UL listed

·M·C·C· Micro Commercial Components — SMB Transient Voltage Protection Devices

TSMBJ is a semiconductor device characterized of having four layers of alternating conductivity: PNPN. Because it's of a silicon origin, TSMBJ does not degrade per use. These devices are needed for protection of sensitive circuits from electrical disturbances caused by lightning and AC power cross conditions. Primary applications are in the telecommunication and data communication circuits.

Features:
• Oxide-Glass passivated Junction • Bi-Directional protection in a single device • High Off-State imped
Low On-State voltage • Plastic material has UL flammability classification 94V-0

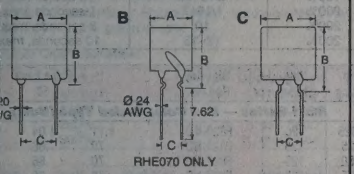
PolySwitch® Resettable Devices

...itch resettable devices protect electrical and electronic circuits against excessive current, voltage, and temperature. ...witching, the PolySwitch device is latched into its high-resistance, protective state by the small, sustained self-...g current. The device will reset only after it has cooled and the fault condition has been corrected, thus avoiding ...ous cycling that could cause circuit damage. The device requires no manual resetting or replacement.

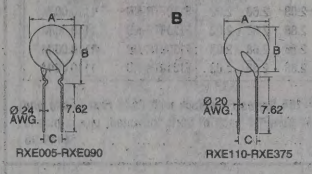
Definitions: • **Maximum Voltage:** The highest voltage the device can withstand (in its tripped state) without damage. • **Hold Current:** The maximum continuous current that will not cause the device to trip at 20°C. • **Trip Current:** The minimum continuous current that will cause the device to trip at 20°C. • **Maximum Current:** The largest fault current, at rated voltage, the device can interrupt without being damaged. **Maximum R:** Maximum non-tripped resistance of the device.

...1 — RGE and RHE Series



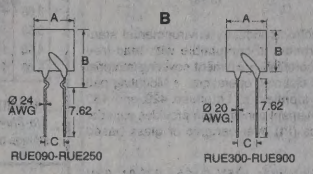
...s product series can be used in a wide variety of automotive, ...nputer and general electronics applications. The RGE devices ...ure high current carrying capability (up to 13 amps) in a small ...kage with fast trip times.

Fig. 2 — RXE Series



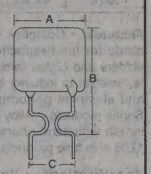
These products function as the general purpose line of circuit protection devices and are well suited for power supplies, alarm systems, speakers, motors and many other applications. The RXE series range in hold currents from .05 to 3.75 amps and complement the RUE devices by providing a higher voltage rating.

Fig. 3 — RUE Series



These devices are also designed to be used in a wide variety of general electronics applications. They complement the RXE series by providing a smaller form factor with lower resistance and higher hold current capability (up to 9 amps).

Fig. 4 — RTE Series



RTE series polyswitches are specifically designed for IEEE-1394 applications.

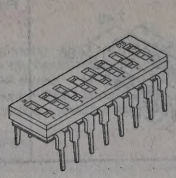
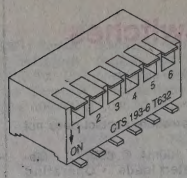
CTS DIP Switches





Electrical Specifications:

Initial Contact Resistance: 25 milliohms (209, 219 Series); 50 milliohms (193, 194, 204, and 206 Series); 100 milliohms (195, 208, and 218 Series).

Max. Contact Resistance: 100 milliohms after 10,000 cycles switching 50mA @ 24VDC (206 Series); 100 milliohms after 7,000 cycles switching 50mA @ 24VDC (193 and 194 Series); 500 milliohms after 2,000 cycles switching 50mA @ @ 24VDC (195 Series); 500 milliohms after 2,000 cycles switching 50mA @ 15VDC or 100mΩ after 1,000 cycles switching 25mA @ 24VDC (208 Series); 50 milliohms max. at end of life (209 and 219 Series).

Gold finish refers to internal contact area of the switch, terminals are solder coated.

Max. Non-Switching Rating: 100mA or 50VDC.

Insulation Resistance: Across open switch and between adjacent closed switches - 1 x 10^9 ohms (218 Series: 100mΩ min.).

Dielectric Breakdown: 500VDC max. for 1 min. (218 Series – 300VDC max.).

Switch Capacitance: Between adjacent switches max. - 5.0pF (218 Series: 10pF).

Shock: Per MIL-STD-202F, method 213B, condition A with no contact inconsistencies greater than 1μsec (206, 208, 209, 218 and 219 Series); no mechanical damage or changes of switch settings with 25G applied (193, 194, 195 and 204 Series).

Vibration: Per MIL-STD-202F, method 204D, condition B (.06" or 15G's between 10Hz to 2KHz) with no contact inconsistencies greater than 1μsec (204, 206, 208, 209, 218, and 219 Series). No mechanical damage or changes of switch settings during or after testing when tested in three mutually perpendicular planes at 10-50Hz sweep or at 60Hz constant vibration (193, 194 and 195 Series).

3M Heat Shrinkable Tubing

YNAR®, EPS-300, SFTW202 GYS, SFTW203, 8420 & 8440 Series

NAR® Series-Modified Polyvinylidene Fluoride: **Shrink Temperature:** 175°C (347°F). **Color:** Clear. **rink Ratio:** 2:1. Cross-linked, thin-walled tubing offers a high degree of mechanical strength and high perature resistance. This has outstanding abrasion resistance and cut-through properties in combination h high dielectric strength. It is inherently flame retardant, semi-rigid and highly resistant to most industrial ls, chemicals arid solvents. Kynar® is a registered trademark of Elf Atochem North America, Inc.

S-300 Series-Adhesive-Lined Flexible Polyolefin: **Shrink Temperature:** 121°C (250°F). **Color:** Black. **rink Ratio:** 3:1. Rapidly shrinks to a skintight fit, forcing the melted adhesive to flow and cover the strate. The adhesive forms a flexible bond with a wide variety of rubbers, plastics and metals. Upon ling, the adhesive solidifies forming a permanent, non-drying, flexible and water resistent barrier.

TW202 GYS Series-Very Flexible Polyolefin: **Shrink Temperature:** 100°C (212°F). **Color:** Green and ow striped. **Shrink Ratio:** 2:1. Meets performance requirements of MIL-I-23053/5 Class 1, and is UL cognized (File No. E48398) for flame retardance. Can be easily surface painted.

TW203 Series-Very Flexible Polyolefin: **Shrink Temperature:** 100°C (212°F). **Color:** Black. **Shrink tio:** 3:1. Meets performance requirements of MIL-I-23053/5 Class 1, and is UL Recognized (File No. 8398) for flame retardance. Can be easily surface painted.

0 Series-EPDM and 8440 Series-Silicone Rubber Tubes: **Color:** Black (8420 Series) and Gray (8440 ies). **Cold Shrink™ Insulators**-Open-ended, tubular rubber sleeves that are factory expanded and embled onto a removable plastic core. Provides a reliable seal without the use of heat, a torch or esive - simply position and unwind the core allowing the tube to shrink and form a water-resistant seal.

CITIZEN. Thermal Printers

THERMAL PRINTERS:

Use a non-impact method for printing. This is accomplished by using chemically treated thermal paper. Chemicals suspended in the paper react to heat generated by the print head to form dots that make up the characters or image. Citizen offers a thermal serial printer and a thermal line printer.

The serial printer uses a moving head that prints one character at a time, it is most suited for character printing, although the high speed model does support graphics. Its main benefit is low cost. Line printers have a fixed print head, printing one line at a time. It is suited for both high speed character and graphic printing. Its main benefits are higher definition graphic printing along with fewer moving parts.

INTERFACE BOARDS:

Acts as an interface between user's system and the thermal printer. Monitors temperature and paper status. Controls motor(s) and thermal head energy for optimal printing. Generates built in test pattern. Accepts both simplified Centronics or RS-232C (TTL only) interface.

NOTE: CBMA now markets the former Panasonic line of Thermal Printer Mechanisms. Please call Digi-Key for details.

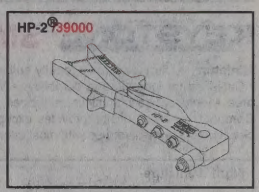
Hand Rivet Tools



The HP-2 is the largest selling hand rivet tool in the industry. Its square shoulder fulcrum pin of cold-formed heat-treated steel prevents pin rotation that can elongate the engaging holes and cause premature tool failure in imitation tools. The HP-2 hand rivet tool sets up to 3/16" steel rivets and comes with four mounted nosepieces (3/32", 1/8", 5/32" and 3/16") and a service wrench.

URFBOARDS® by CAPITAL ADVANCED TECHNOLOGIES INC™

The Breadboarding Medium for Surface Mount

Surfboard Concept: The concept behind SURFBOARDS is antly simple. Many models incorporate foil patterns that are designed ccommodate a wide variety of component mounting footprints. IRFBOARD® models for SOICs and PLCCs provide standard nting footprints for the IC and depending on the model chosen, will de a prototyping area for additional components or provide a direct ut. Most SURFBOARD® models feature SIP (single in line) pins that make prototyping and interfacing with other circuits easy.

Specifications: • Material: G-10 FR-4 Fiberglass laminate, 1oz. Cu. .032" (.81mm). Thickness ±.005" (±.13mm) • Finish: Level 60/40 Solder alloy • S.I.P. Pins: On applicable models. Soldered on .100" (2.54mm) centers. SURFBOARDS® can be hand soldered and are compatible with most industrial soldering processes. (Suggested soldering and assembly guidelines included).

The universal circuit patterns allow for the mounting of 0603, 0805, 1206 and mini-melf packages as well as a wide variety of 3 terminal devices.

"331" Organic Water Soluble Flux

Kester "331" Organic Flux is a water soluble formula for use in flux-cored solder wire. Kester "331" flux is more effective than rosin fluxes in soldering difficult metals and allows a simple water wash for flux cleanup. The flux is more heat stable than most organic fluxes, resulting in minimal smoke and odor. The residue can be completely removed with a simple water rinse. Kester "331" is classified as type ORH1 per IPC ANSI/J-STD-004. Red Label.

Sealed Lead-Acid Batteries (Valve Regulated)

TECHNICAL FEATURES: "DO NOT LEAK!!"

Sealed Construction: BB unique construction and sealing technique ensures that no electrolyte leakage should occur from the terminals or case. They are classified as "Non-Spillable" and meet all requirements of the International Air Transport Association (I.A.T.A.) and D.O.T.

Electrolyte Suspension System: All BB batteries utilize an electrolyte suspension system consisting of a glass fibre separator material. This suspension system helps to achieve maximum service life, by fully retaining the electrolyte and preventing its escape from the separator material. No silica gels or other contaminants are used.

Maintenance Free Operation: During the life of BB batteries, there is no need to check their specific gravity or add water etc. In fact, there are no provisions for such maintenance functions to be carried out.

Operation In Any Orientation: The combination of sealed construction and BB's electrolyte suspension system permits operation of BB batteries in any orientation, but upside-down charging should be avoided. Battery will not lose its capacity, electrolyte, or service life under any orientation.

Low Pressure Venting System: BB batteries are equipped with a safe, low pressure venting system, which is designed to release excess gas and reseal automatically in the event of the internal gas pressure rising to an unacceptable level. This low pressure venting system, coupled with the significantly high recombination efficiency, make BB batteries one of the safest valve regulated lead acid batteries available.

- **Heavy Duty Grids:** The heavy duty lead calcium alloy grids in BB batteries provide an extra margin of performance and service life in both float and cyclic applications, even in conditions of deep discharge.

The manufacturer suggests peak charging all sealed lead acid batteries before use and intermittently during storage.

- **U.L. Component Recognition:** U.L. Component Recognition under UL1989, requires that the battery safely vent when overcharged. It further requires that the equipment and battery be submitted together for formal UL approval.

Digi-Key is not approved by any state or federal agency as an authorized supplier of product for medical, life support or life sustaining devices or systems.

Panasonic® Sealed Lead-Acid Batteries (Valve Regulated)

GENERAL FEATURES: "DO NOT LEAK!!"

High Quality & High Reliability: The LCR battery has stable and reliable capacity. 100% tested on line for voltage, capacity, and seals. And all vents are 100% visually inspected during the final assembly process.

High Power Density: These batteries save installation space, while providing full and reliable power for the equipment, and many have been designed for rapid recharge, or for high power output.

Leak-resistant Structure: The LCR battery uses an absorbed electrolyte system. The LCR batteries have exceptional leak resistance, **and can be used in any position.**

Long Service Life; Float or Cyclic: The LCR battery has long life in float or cyclic service.

- **Easy Maintenance:** There is no need to check the specific gravity of the electrolyte or to add water during the service life. Totally sealed, and needs only charging for maintenance.
- **No Corrosive Gas Generation:** There is no corrosive gas generation during normal use.
- **Exceptional Deep Discharge Recovery:** LCR batteries have exceptional deep discharge recovery and charge acceptance, even after deep or prolonged discharge.
- **D.O.T and I.A.T.A. Approval:** Transportation; The SLA batteries should be handled as common cargoes for both air and boat shipping.
- **U.L. Component Recognition:** U.L. Component Recognition under UL1989, requires that the battery safely vent when overcharged. It further requires that the equipment and battery be submitted together for formal UL approval. **(UL Component Recognition does NOT remove this requirement for complete package testing).** The manufacturer suggests peak charging all sealed lead acid batteries before use and intermittently during storage.

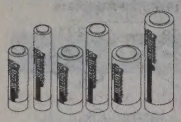
Panasonic® Nickel-Metal Hydride Batteries and Tabbed Versions



Features: • **Superior Energy Density:** Nickel-metal hydride batteries have approximately double the capacity compared with Panasonic's standard Ni-Cad batteries • **High Cycle Life:** Like Ni-Cad batteries, nickel-metal hydride batteries can be repeatedly charged and discharged up to approx. 500 cycles (under ideal conditions).

Because a specially designed charger will be necessary, please consult the Panasonic Technical Handbook (P001-ND) regarding the charge system • **Flat trickle charge cannot be used** • **Excellent Discharge Characteristics:** Since the internal resistance of nickel-metal hydride batteries is low, continuous high-rate discharge up to 3C (10C for 4/5SC, SC) is possible in the same way as for Ni-Cad batteries. • **Excellent Reliability:** Self-discharge performance is the same or better than that of nickel-cadmium batteries. In addition, charging batteries after extended storage restores original battery capacity. Battery safety has also been improved and verified through testing under a wide range of conditions of use.

Applications: • Communication • Office Automation • Audio Visual Equipment • Other High-Tech Products.

Caution for Safety: Improper usage may cause battery liquid leakage, heat generation or explosion, resulting in equipment failure or injury • Do not disassemble or rework the battery • Do not solder the battery directly • Do not use new batteries together with old batteries, or different type batteries mixed together • Follow the specified charge conditions.

Note: • Battery Packs made with NIMH Cells include a thermostat from Texas Instrument.

Note: • Nickel-metal hydride batteries are not a drop-in replacement for Ni-Cad batteries.

It is the responsibility of each user to ensure that each battery application system is adequately designed safe and compatible with all conditions encountered during use, and in conformance with existing standards and requirements.

Digi-Key is not approved by any state or federal agency as an authorized supplier of product for medical, life support or life sustaining devices or systems.

Panasonic® Nickel Cadmium Batteries

The Panasonic nickel-cadmium battery is a rechargeable sealed nickel-cadmium alkaline cell.

Features: • Long life • Excellent discharge characteristics • Long shelf life • High-rate charging • Wide temperature range • Reliable, self-resealing vent • Sealed, strong, leakproof construction

Applications: ***For Cyclic Use:*** • Consumer applications • Office equipment • Tools • Photography • Toys and Hobby ***For Trickle or Float Charge Use:*** • Emergency devices • Memory back-up **Special Purpose Batteries:**

Rapid-charge "R" Type: The "R" type cell has a specially improved negative plate with increased gas absorption characteristics. It can be subjected to controlled charging at the 1C rate and rapid-charge in 1 to 1.5 hours is possible.

High-temperature "H" Type: By using a polypropylene separator, the "H" type cell can withstand a temperature of 65° (149°F) during use. When charging is conducted at a low charging current of C/20 to C/30 in a high-temp. ambient, th "H" type cell has a sharply improved capacity compared to a standard cell, due to special electrolyte.

Super High Capacity and Rapid Charge "S" Type: Super high capacity and rapid charge "S" type batteries are ideal fo today's high capacity needs. They feature increased capacity and rapid charging within approximate 1 hour. The high density positive base material of foam nickel is combined with the pasted negative plate to produce a capacit approximately 40% greater than that of the rapid-charge "R" type battery of the same size.

Digi-Key is not approved by any state or federal agency as an authorized supplier of product for medical, life support or life sustaining devices or systems.

Panasonic Lithium Batteries

The main features of lithium batteries are as follows:

- **High Voltage:** Nominal voltage is 3V, which is nearly double that of other batteries which use the aqueous electrolyte system, such as manganese dry batteries, and silver-oxide batteries.
- **High Energy Density:** Overwhelmingly high energy density, as compared with conventional batteries and other lithium batteries. The energy density is 5 to 10 times higher than that of manganese dry batteries.
- **Long Service and Shelf Life:** Since Panasonic lithium batteries are composed of chemically and thermally stable material, self-discharge is extremely small. Deterioration when stored at room temperatures is ca. 0.5% annually – worry about deterioration is unnecessary.
- **Stable Flat Discharge Voltage:** Since conductive carbon is continuously formed during discharge, internal impedance does not increase until the end of discharge, thus stabilizing discharge voltage.
- **Excellent Temperature Characteristics:** Organic solvent ensures a low electrolyte freezing point so that the batteries can be used in a wide temperature range, -40°C ~ 85°C is standard (-40°C ~ 125°C for the High Temperature Coin Type; -40°C ~ 70°C for Camera Type; -30° ~ 60°C for CR2004/P9A).
- **BR Types versus CR Types:** BR, or (CF) n/Li, batteries provide a more stable voltage particularly during the last half of discharge, while CR, or Mn02/Li, batteries provide a higher voltage during the first half. CR batteries also can provide a higher current capability than BR batteries. In storage, BR batteries perform better at high temperatures. These characteristics must be taken into consideration when selecting a battery for a particular application.
- **UL Approval:** Panasonic Lithium batteries are UL recognized. UL File No. MH12210.
- **DOT Exemption:** Panasonic lithium cells and multiple cell batteries are authorized for transportation, in commerce, by U.S. shipping exemption DOT-E7052.
- **Disposal Information:** Panasonic lithium cells are not an EPA listed hazardous waste, but may be considered a "characteristic" hazardous waste. Lithium metal, the anode component of the cells, is considered by the U.S. EPA to be hazardous when disposed because it is reactive with water. However, a cell which contains a small quantity of lithium metal is not necessarily a hazardous waste. Disposal regulations and policies are different in each State and are subject to frequent changes. Contact your local jurisdiction for specific advice on disposal.

C Blowers

NMB-MAT DC Blowers are most suitable for cooling in high back pressure applications. Since the fan impeller is housed inside a rugged plastic enclosure, the blower is not affected by high back pressure caused by objects in close proximity to the exhaust port. Sensor third wire options available on most models.

Specifications: • Operating Temperature: -10°C ~ 60°C • Storage Temperature: -40°C ~ 75°C • Blowers with Hydro-Wave and Ball BearingTechnology

ANALOG DEVICES Digital Isolators

Coupler isolation technology combines the dc isolation properties of microtransformers with semiconductor processing techniques to provide performance, power and integration benefits superior to those offered by traditional optocoupler technology.

Coupler components operate at higher data rates, provide better timing accuracy and common-mode transient immunity and operate at lower power levels than optocouplers. They operate over wider temperature and supply voltage ranges than their optical competition.

The Coupler technology rescues modern designs from the poorly controlled, temperature sensitive and time-dependent current transfer characteristics of standard optocouplers.

Panasonic®

Hall Effect Sensor ICs

Panasonic's Hall IC is a combination of a Hall element, amplifier, Schmidt circuit, and stabilized power supply/temperature compensator integrated on an identical chip by using the IC technology. It amplifies Hall element output at the amplifier, converts into a digital signal through the Schmidt circuit, and drives the TTL or MOS IC directly.

Features: • Stable temperature characteristics due to the additional temperature compensator • TTL and MOS ICs directly driveable by output • Semipermanent service life due to no contact parts • Small change of the operating flux density against mechanical stress • Provided with the output pull-up resistors (typ 27kΩ or open collector output (see chart) • Operating Temperature: -40°C ~ 100°C (-40°C ~ 85°C f DN6851 - DN6853) • Supply Current Max: 6mA • Output Circuit Ma 20mA

Applications: • Speed Sensors • Position Sensors • Rotation Senso • Keyboard Switches • Microswitches

† Unidirectional and is only sensitive to either north or southside of magnetic; Bidirectional is sensitive to an alternating magnetic fields of both north and south sides.

Accelerometers

Operating Temperature Range: -40°C ~ 85°C • **Supply (typ.):** 5.0VDC

The device can measure both +/- acceleration. With no input acceleration the output is at midsupply. For positive acceleration the output will increase above Vdd/2 and for negative acceleration the output will decrease below Vdd/2.

QUANTUM RESEARCH GROUP Sensors

QProx™ / QTouch™ Charge-Transfer ("QT") General Description: These are self-contained digital capacitance ICs capable of detecting proximity, touch, and fluid level. With appropriate electrodes they can sen through sealed surfaces made of glass, plastic, stone, ceramic, and wood, up to thicknesses of several inches. This capability coupled with an ability to continuously calibrate leads to new product concepts. They a designed specifically for control panels in home appliances, PC peripherals, machinery, security systems, lighting controls, or anywhere a mechanical switch or button may be found. Versions also available for fluid sensing

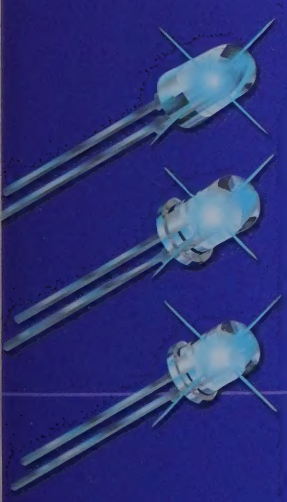
Blue LEDs



High Brightness

Max Ratings:

Power Consumption: 120mW
Forward Current: 30mA
Reverse Voltage: 5V
Operating Ambient Temperature: -25 ~ +80°C.
Storage Temperature: -30 ~ +100°C
Water clear lens when off.

Blue LED Precautions in Handling:

A blue LED is sensitive to static electricity and care should be fully taken in handling it. Particularly, when an overvoltage is applied, which exceeds the absolute maximum rating of the blue LED, its energy damages the LED.
